GAMA Physical Therapy

PROMINENT HOME HEALTH CARE PHYSICIAN ORDERS

Patient Name	Medical Records #	Attending Physician
DERVISHIAN, OGANES	66	FORTALEZA, PAUL

PATIENT'S STATUS/FINDINGS

Patient C/O pain in LB/BLE/BUE 5/10, increased joint pain/joint swelling, decreased ROM in BLE/BUE/LB. These directly impact overall ability to ambulate, limit ADL's, and provide unsteady movement. Patient requires assistance with bed mobility, transfer, safety, balance and all other actions performed. Patient will benefit from skilled PT services by improving self-functional level and capability of completing activities.

Frequency: 1w1 3w3 1w1

PHYSICIAN ORDERS

PHYSICAL THERAPY: Evaluation

- Therapeutic exercises for BLE/LB.
- 2. Balance and coordination exercises when standing/sitting.
- 3. Bed mobility and transfer with body mech. and hand placement cues;
- 4. Pre-Gait with balance and postural cues and safety training.
- 5. HEP training, muscle reeducation and safety training with family/CG.
- 6. Endurance training, proper use of DME if needed.
- 7. Pre-Gait training on level surfaces with coming to stand activities.
- 8. Gait training with or w/o AD on level and uneven surfaces safely.

PT: Evaluation and assessment to determine patient's condition and physical therapy needs, provision of therapeutic/strengthening exercises, balance/coordination training, mobility/ROM exercises, gait/transfer training, home safety, PCG education on home exercise program and proper body mechanics; frequency of visits to follow post-evaluation/assessment.

22. Goal/Rehabilitation Potential/Discharge Plans continued

- 3. Within 4-6 weeks patient will show improvement in musculoskeletal status as evidenced by improved pain control, mobility, no joint pain, ability to perform ADL. Patient will verbalize pain controlled at acceptable level of 1-2/10.
- 4. Within 6-8 weeks patient's cardiovascular condition will stabilize as evidenced by vital signs within normal parameters with BP in the range 90-140 mmHg systole and 60-90 mmHg diastole, clear breath sounds, and no s/s of increased dyspnea.
- 5. Within 6-8 weeks patient/PCG will demonstrate independence with DM care with patient's BS stabilizing within 70-200mg/dl asymptomatic of hypo/hyperglycemia, will demonstrate compliance to prescribed diet/diabetic regimen, will verbalize/demonstrate knowledge of regularly perform diabetic skin/foot exam.
- 6. Within 6-8 weeks patient will show improvement of neurological/mental condition, patient/PCG will verbalized reduce s/s of depression, and dementia.
- 7. Patient will not develop any adverse effects of High risk medications. No falls/injuries/bleeding/ hospitalizations during episode of care.
- 8. Patient will not have any s/s of bleeding related to Aspirin therapy such as unusual pain/swelling/discomfort, unusual bruising, and prolonged bleeding from cuts or gums, persistent/frequent nosebleeds, pink/dark urine, coughing up or vomiting blood.
- 9. Patient will achieve PT goals and demonstrate ability to follow home exercise program, improved strength/endurance, ability to perform safe transfer/ambulation (with or without assistive device), improved balance/coordination.

REHABILITATION POTENTIAL: Fair for patient to achieve partial return to a previous higher level of function.

DISCHARGE PLAN: Discharge patient in a safe living environment with PMD follow up appointments and supervision, under family/caregiver for minimal assistance with ADLs/IADLs.

DISCHARGE SUMMARY WILL BE AVAILABLE FOR PRIMARY CARE PHYSICIAN
